What is Our Embedded Resources Service?

Unlimited Technology's Embedded Resources Service (ERS) offers a flexible approach to meeting our clients' immediate and long-term resourcing needs. As one of the nation's leading providers of end-to-end technology solutions integration, our team of experts have in-depth experience working with ground-breaking technology and are recognized innovators in the physical and IT security, cyber, and managed services industries.

Expertise: When and Where You Need Us

ERS is designed with one goal: to ensure that our clients have the right specialists with the right expertise where and when they need them so that they can remain focused on their core business and let UT personnel handle the rest. Whether your business needs a temporary/short-term resource or a full-time equivalent (FTE), we can provide personnel with the know-how to carry out your unique vision

Bringing Tangible Value to Our Clients

UT's Embedded Resources Service offers the following benefits:

· Provides part-time and/or full-time resources to augment your existing staff.
· Eliminates the burden of staffing, training, and personnel management.
· Develops a tailored program designed to achieve your business goals at scale.
· Reduces the risk to your project schedules, budgets, technical implementations, and your overall day-to-day operations.

Resources To Meet Changing Requirements

With the highest level of safety and security, our Embedded Resources Service can provide you with:

· **Skilled Technicians** who are onsite on a regular agreed upon schedule to efficiently handle service calls, perform routine maintenance inspections of existing equipment, or assist in installations as needed.
· **Project Managers** who can drive projects to completion, provide coordination between internal and external stakeholders, manage established schedules, budgets and deliverables, and even supervise embedded technical and engineering support teams.
· **Engineers & Systems Administrators** who preside over the design, installation, implementation, and standardization of client specific systems, to include the maintenance of system documentation.
